Exercise on Ball Selection

- **3** balls are selected randomly from a bag with **36** balls. If the bag contains 8 yellow balls, 7 green balls, 6 blue balls, 5 red balls, and 10 black balls. How many ways are there such that at least 1 blue ball is selected?
- Solution
- There are C(36,3) to select 3 balls with no constraints.
- There are C(30,3) ways to select 3 balls that are not blue.
- Thus, the number of ways to select 3 balls with at least one blue is: C(36,3)-C(30,3)=3080.
