Combinations with Repetition

- How many ways are there to select 5 bills from the following 7 denominations: \$1, \$2, \$5, \$10, \$20, \$50, and \$100? Assume there are enough bills of each denomination
- **Solution**
  Select the bills from the appropriate position of a cash box illustrated below.
- Equivalently, according to the "*Distributing Objects into Boxes*" framework, distribute 5 indistinguishable objects (bills) into 7 distinguishable boxes (denominations).
